Meeting: sente

Date & Time: July 15, 2024, 10:23 a.m.

Chair Of The Meeting: Mr.muwanguzi

Location: None

Purpose:

bjdnks jklsdbk

jk kjdnklsd.nmld

Attendees:

Full Name	Department	Position
sentongo muhsin	HR	Manager
sentongo muhsin	HR	Manager

Minutes:

Agenda:

The error indicates that Django cannot find a common ancestor for the conflicting migrations `0011_alter_meetingminute_action_items_decisions_and_more` and `0012_tablemeeting_created_by_tablemeeting_end_time_and_more`. This can happen if the migration history has diverged and there are multiple leaf nodes (endpoints) in the migration graph.

Discussion:

After running the command, Django will create a new merge migration file. Review this file to ensure it correctly combines the changes from both conflicting migrations. This file will be located in the `migrations` directory of the `meetings` app and will have a name like `0003_merge.py`

Action & Decisions:

Step 4: Verify the Database State

After running the migrations, verify that your database is in the expected state and that all changes from the conflicting migrations have been applied.

Example Merge Migration

Here's an example of what the merge migration might look like, assuming there are no additional operations needed:
